NOAA, EPA Disapprove Oregon's Coastal Nonpoint Pollution Program

Foreshadowed Action Meets Court-Ordered Deadline

In order to comply with a court-ordered settlement (deadline?), The National Oceanic and Atmospheric Administration (NOAA) and the U.S. Environmental Protection Agency (EPA) today announced their decision to disapprove the State of Oregon's coastal nonpoint pollution control program. The official disapproval is a procedural move that both Agencies hope will help propel the state toward resolving the remaining weakness in their Coastal Zone protection plan, and re-secure their eligibility for federal funding under the Coastal Zone Act Reauthorization Amendments (CZARA) program.

Having foreshadowed their disapproval in a December 2013 proposal, Both NOAA and EPA have officially signaled their willingness to help the Oregon strengthen its existing program to reduce polluted runoff (primarily) from timber

harvesting operations. This runoff has been shown to damage and destroy habitat of both endangered coastal salmon and trout (and other species?) and is the last part of a broad suite of protections that the State has already put in place to protect its coastal and shoreline landscape.
